# **Revision History**

Name	Date	Reason For Changes	Version

# **Guidance for Use Case Template**

Document each use case using the template shown in the Appendix. This section provides a description of each section in the use case template.

## 1. Use Case Identification

### 1.1. Use Case ID

Give each use case a unique numeric identifier, in hierarchical form: X.Y. Related use cases can be grouped in the hierarchy. Functional requirements can be traced back to a labeled use case.

#### 1.2. Use Case Name

State a concise, results-oriented name for the use case. These reflect the tasks the user needs to be able to accomplish using the system. Include an action verb and a noun. Some examples:

- View part number information.
- Manually mark hypertext source and establish link to target.
- Place an order for a CD with the updated software version.

# 1.3. Use Case History

## 1.3.1 Created By

Supply the name of the person who initially documented this use case.

#### 1.3.2 Date Created

Enter the date on which the use case was initially documented.

#### 1.3.3 Last Updated By

Supply the name of the person who performed the most recent update to the use case description.

#### 1.3.4 Date Last Updated

Enter the date on which the use case was most recently updated.

# 2. Use Case Definition

#### **2.1. Actor**

An actor is a person or other entity external to the software system being specified who interacts with the system and performs use cases to accomplish tasks. Different actors often correspond to different user classes, or roles, identified from the customer community that will use the product. Name the actor(s) that will be performing this use case.

# 2.2. Description

Provide a brief description of the reason for and outcome of this use case, or a high-level description of the sequence of actions and the outcome of executing the use case.

#### 2.3. Preconditions

List any activities that must take place, or any conditions that must be true, before the use case can be started. Number each precondition. Examples:

- 1. User's identity has been authenticated.
- 2. User's computer has sufficient free memory available to launch task.

#### 2.4. Postconditions

Describe the state of the system at the conclusion of the use case execution. Number each postcondition. Examples:

- 1. Document contains only valid SGML tags.
- 2. Price of item in database has been updated with new value.

# 2.5. Priority

Indicate the relative priority of implementing the functionality required to allow this use case to be executed. The priority scheme used must be the same as that used in the software requirements specification.

# 2.6. Frequency of Use

Estimate the number of times this use case will be performed by the actors per some appropriate unit of time.

#### 2.7. Flow of Events

Provide a detailed description of the user actions and system responses that will take place during execution of the use case under normal, expected conditions. This dialog sequence will ultimately lead to accomplishing the goal stated in the use case name and description. This description may be written as an answer to the hypothetical question, "How do I <accomplish the task stated in the use case name>?" This is best done as a numbered list of actions performed by the actor, alternating with responses provided by the system.

#### 2.8. Alternative Flows

Document other, legitimate usage scenarios that can take place within this use case separately in this section. State the alternative course, and describe any differences in the sequence of steps that take place. Number each alternative course using the Use Case ID as a prefix, followed by "AC" to indicate "Alternative Course". Example: X.Y.AC.1.

# 2.9. Exceptions

Describe any anticipated error conditions that could occur during execution of the use case, and define how the system is to respond to those conditions. Also, describe how the system is to respond if the use

case execution fails for some unanticipated reason. Number each exception using the Use Case ID as a prefix, followed by "EX" to indicate "Exception". Example: X.Y.EX.1.

#### 2.10. Includes

List any other use cases that are included ("called") by this use case. Common functionality that appears in multiple use cases can be split out into a separate use case that is included by the ones that need that common functionality.

### 2.11. Special Requirements

Identify any additional requirements, such as nonfunctional requirements, for the use case that may need to be addressed during design or implementation. These may include performance requirements or other quality attributes.

# 2.12. Assumptions

List any assumptions that were made in the analysis that led to accepting this use case into the product description and writing the use case description.

#### 2.13. Notes and Issues

List any additional comments about this use case or any remaining open issues or TBDs (To Be Determineds) that must be resolved. Identify who will resolve each issue, the due date, and what the resolution ultimately is.

# **Use Case Template**

Use Case ID:	UC-001		
Use Case Name:	Login		
Created By:	Mayukhi	Last Updated By:	Manasi
Date Created:	31 Jan 2025	Date Last Updated:	9 Feb 2025

Actor:	User
Description:	User logs into the system to access personalized features.
Preconditions:	1. User has an existing account.
	2. User has a valid email and the corresponding password
	registered in the system.
Postconditions:	1. Success: User is authenticated and gains access to the
	system's features.
	2. Failure: The email and/or the password is invalid
Priority:	High
Frequency of Use:	Very frequent (multiple times a day)
Flow of Events:	1. User opens the application.
	2. The system displays a login interface requesting a username and password.
	3. User enters their credentials.
	4. The system validates the credentials by comparing them
	with the database.
	5. If the credentials are correct, the system grants access to
	user's dashboard.
	door o daonoodra.
Alternative Flows:	AF-S5: If the credentials are incorrect,
	1. The interface displays the message "Invalid email and/or
	password. Please try again!" for 2 seconds.
	2. The display returns to the step 2.
	3. If credentials are still incorrect after 3 tries, the option
	"Forget Password" is displayed.
	4. The system prompts the user to enter their registered email.
	5. A password reset link or OTP is sent to the registered
	email.
	6. User sets a new password and proceeds to log in.
Exceptions:	Account locked: If multiple login attempts fail, the account may be
	temporarily locked
Includes:	Change Username and Password
Special Requirements:	- The system must ensure secure communication for login
	(e.g., HTTPS and encrypted passwords).
	- The system must lock accounts after a predefined number
	of failed attempts to ensure security.
Assumptions:	User has a stable internet connection.
Assumptions.	1. User has a static internet connection.

Notes and Issues:	Consider adding multi-factor authentication for enhanced security

Use Case ID:	UC-002		
Use Case Name:	Search Destination		
Created By:	Manasi	Last Updated By:	Yun Jia
Date Created:	31 Jan 2025	Date Last Updated:	17 Feb 2025

A	II I C II
Actor:	User, and Guest User
Description:	Allows users to search for parking destinations and apply various filters to find suitable parking locations. Users can view
	recommended car parks, detailed parking information, and access
	specific features like pricing, EV parking, sheltered parking, and distance information.
Deconditions	
Preconditions:	1. User is logged in to account or accessing as guest user
	2. Has location services (GPS) enabled
Postconditions:	3. System is operational and accessible  1. User on view filtered list of positing lets metabling their
Postconditions.	User can view filtered list of parking lots matching their criteria
	User can access detailed information about specific car
	parks
	3. User can view recommended parking options.
Priority:	High
Frequency of Use:	Very frequent (multiple times a day)
Flow of Events:	1. User enters a destination in the search bar
Flow of Events.	2. System displays a dropdown of search results based on the
	user's input.
	3. User selects a destination from the dropdown list
	4. System displays nearby car parks based on the selected
	destination.
	5. Users can view car park details (UC-009) for specific
	parking locations.
	6. System shows recommended car parks (UC-008)
	7. User selects desired filters:
	7.1. Pricing preferences
	7.2. EV parking requirements
	7.3. Sheltered parking needs
	7.4. Distance preferences
	8. System processes filter criteria
	9. System displays filtered results, showing only car parks that
	match the selected filters.
Alternative Flows:	AF-S5: If no results match filter criteria:
	<ol> <li>System displays message indicating no matches</li> </ol>
	2. Suggests modifying filter settings
Exceptions:	1. System cannot access location services
	1.1. Display error message
	1.2. Prompt user to check device settings
	2. Connection failure
	2.1. Display error message
	2.2. Offer retry option
Includes:	1. Filter Features

Special Requirements:	<ol> <li>Get Pricing Information</li> <li>Get EV Parking Information</li> <li>Get Sheltered Parking Information</li> <li>Get Distance Information</li> <li>Show Recommended Car Park</li> <li>View Car Park Details</li> <li>Real-time parking availability data</li> <li>Accurate GPS functionality</li> <li>Up-to-date pricing information</li> <li>Current EV charging station status</li> </ol>
Assumptions:  Notes and Issues:	<ol> <li>User has stable internet connection</li> <li>Device has GPS capability</li> <li>Parking data is regularly updated</li> <li>User understands basic filtering concepts</li> </ol> 1. Real-time updates for parking availability

5. System displays filtered results	
5.1. System sorts car parks from	
if the price range filter is so	
5.2. System sorts car parks with	
the top if the distance prefe	
6. User can modify or clear filters as a	needed
Alternative Flows: AF-S5: If no results match filter criteria:	
3. System displays message indicating	g no matches
4. Suggests modifying filter settings	
Exceptions: None	
Includes: 1. Get Pricing Information	
2. Get EV Parking Information	
3. Get Sheltered Parking Information	
4. Get Distance Information	
Special Requirements:	
1. Responsive filter interface	
2. Real-time filter application	
3. Multiple filter selection capability	
4. Filter combination logic	
Assumptions: 1. All filter options are functioning co	orrectly
2. Data for each filter category is available.	

	<ul><li>3. Filters can be applied in any combination</li><li>4. System can handle multiple simultaneous filters</li></ul>
Notes and Issues:	
	1. Implement filter history for quick reuse

Use Case ID:	UC-004		
Use Case Name:	Get Pricing Information		
Created By:	Manasi	Last Updated By:	Manasi
Date Created:	1 Feb 2025	Date Last Updated:	9 Feb 2025

Actor:	User, Guest		
Description:	Retrieves and displays detailed pricing information for selected parking locations, including hourly rates, daily rates, special rates (if any), and payment methods accepted.		
Preconditions:	<ol> <li>Filter Features functionality is active</li> <li>Pricing data is available in the system</li> <li>User has accessed the filter options</li> </ol>		
Postconditions:	<ol> <li>Pricing information is displayed to user</li> <li>User can view different rate categories</li> <li>Payment method information is accessible</li> </ol>		
Priority:	High		
Frequency of Use:	Very frequent (Multiple times each search)		
Flow of Events:	<ol> <li>System retrieves pricing data for available parking locations</li> <li>System displays pricing details, including:         <ol> <li>Standard parking rates</li> <li>Peak hour rates (if applicable)</li> <li>Special rates (weekend/holiday)</li> </ol> </li> <li>The system sorts parking locations from lowest to highest price</li> </ol>		
Alternative Flows:	None		
Exceptions:	<ol> <li>Pricing information unavailable:         <ol> <li>Display "Price information temporarily unavailable"</li> <li>Show last updated timestamp</li> <li>Invalid price range selected:                 <ol> <li>Display error message</li> <li>Suggest valid price range</li> </ol> </li> </ol> </li> </ol>		
Includes:	None		
Special Requirements:	Real-time price updates     Currency conversion capability     Clear price breakdown display     Support for multiple payment methods		
Assumptions:	<ol> <li>Pricing data is current and accurate</li> <li>System has access to real-time pricing updates</li> <li>Payment method information is current</li> <li>Users understand local currency</li> </ol>		
Notes and Issues:	Consider adding price estimation calculator		

Use Case ID:	UC-005		
Use Case Name:	Get EV Parking Information	n	
Created By:	Manasi	Last Updated By:	Manasi
Date Created:	1 Feb 2025	Date Last Updated:	9 Feb 2025

Actor:	User, Guest	
Description:	Provides users with detailed information about Electric Vehicle	
	(EV) parking facilities, including charging station availability, types	
	of chargers, charging rates, and real-time availability status.	
Preconditions:	1. Filter Features functionality is active	
	2. EV parking data is available in the system	
D 4 177	3. User has accessed the filter options	
Postconditions:	1. EV parking information is displayed to user	
	2. Charging station availability status is shown	
Duiquitan	3. User can view detailed charging facility information	
Priority:	High	
Frequency of Use: Flow of Events:	Frequent (Daily by EV owners)	
Flow of Events:	<ol> <li>System retrieves EV parking data</li> <li>System displays:</li> </ol>	
	<ol> <li>System displays:</li> <li>2.1. Available EV parking spots</li> </ol>	
	2.2. Charging station types	
	2.3. Real-time availability	
	2.4. Charging rates	
	3. User can view detailed information for each location	
	4. System updates availability in real-time	
Alternative Flows:	AF-S3.1: No EV charging stations available:	
	System shows nearest alternative locations	
Exceptions:	1. Real-time data unavailable:	
	1.1. Display last known status	
	1.2. Show timestamp of last update	
	2. Charging station malfunction:	
	2.1. Display alert message	
T 1 1	2.2. Provide customer service contact	
Includes:	None	
Special Requirements:	1. Real-time charging station status updates	
	<ul><li>2. Integration with EV charging networks</li><li>3. Power output information display</li></ul>	
	4. Charging time estimations	
Assumptions:	Charging time estimations     EV charging station data is current	
Assumptions.	2. System can track charging station status	
	3. Users understand EV charging terminology	
	4. Network connectivity for real-time updates	
Notes and Issues:		
1 12125 4114 125465.	1. Include charging speed information	

Use Case ID:	UC-006		
Use Case Name:	Get Sheltered Parking Infor	rmation	
Created By:	Manasi	Last Updated By:	Manasi
Date Created:	1 Feb 2025	Date Last Updated:	9 Feb 2025

Actor:	User, Guest		
Description:	Provides users with comprehensive information about sheltered		
	parking facilities, including covered parking spots, basement		
D 177	parking, multi-story car parks, and weather protection features.		
Preconditions:	1. Filter Features functionality is active		
	<ul><li>2. Sheltered parking data is available in the system</li><li>3. User has accessed the filter options</li></ul>		
Postconditions:	<u> </u>		
Postconditions.	<ol> <li>Sheltered parking options are displayed to user</li> <li>Type of shelter/coverage is clearly indicated</li> </ol>		
	3. Availability status of sheltered spots is shown		
Priority:	High		
Frequency of Use:	Frequent (Daily, especially during adverse weather - very applicable		
requency or osc.	to Singapore which has prolonged monsoon seasons)		
Flow of Events:	System retrieves sheltered parking data		
	2. System displays:		
	2.1. Available sheltered parking locations		
	2.2. Type of shelter provided		
	2.3. Current availability		
	3. User can view detailed shelter information		
	4. System updates availability in real-time		
Alternative Flows:	AF-S3.1. No sheltered parking available:		
	System shows nearest alternatives		
Exceptions:	Shelter status unavailable:		
Exceptions.	1.1. Display last known status		
	1.2. Show timestamp of last update		
	2. Maintenance or closure:		
	2.1. Display alert message		
	2.2. Show alternative sheltered options		
Includes:	None		
Special Requirements:	Real-time availability updates		
	2. Clear shelter type categorization		
	3. Building connection information		
	4. Weather protection details		
Assumptions:	1. Shelter status data is current		
	2. System can differentiate shelter types		
	3. Building access information is updated		
27	4. Weather protection features are maintained		
Notes and Issues:	1. Consider adding weather alerts integration		
	2. Consider adding height restrictions		

Use Case ID:	UC-007		
Use Case Name:	Get Distance Information		
Created By:	Manasi	Last Updated By:	Manasi
Date Created:	1 Feb 2025	Date Last Updated:	9 Feb 2025

Actor:	User, C	Guest, Location Services
Description:	Provides users with accurate distance and travel time information	
		n their location and parking facilities, including walking
	distanc	e to final destination and different route options.
Preconditions:	1.	Filter Features functionality is active
	2.	
	3.	1
	4.	
Postconditions:	1.	Distance information is displayed to user
	2.	Walking routes and times are shown
	3.	Alternative routes are available if applicable
Priority:	High	
Frequency of Use:	Very fr	equent (Multiple times per search)
Flow of Events:	1.	System retrieves current location data
	2.	System displays:
		2.1. Distance to parking location
		2.2. Estimated driving time
		2.3. Walking distance to final destination
	3.	User can view detailed route information
	4.	System updates travel times based on traffic
Alternative Flows:	None	
Exceptions:	1.	Unable to calculate route:
		1.1. Display error message
		1.2. Suggest alternative locations
	2.	Traffic disruptions:
		2.1. Show traffic alerts
		2.2. Provide alternate routes
Includes:	None	
Special Requirements:	1.	Real-time GPS integration
	2.	Traffic data integration
	3.	Accurate walking route calculation
	4.	Multiple route calculation capability
Assumptions:	1.	GPS services are available
	2.	Road and pathway data is current
	3.	Traffic information is available
	4.	Walking routes are accessible
Notes and Issues:	1.	Consider adding public transport integration

Use Case ID:	UC-008		
Use Case Name:	Show Recommended Car P	ark	
Created By:	Manasi	Last Updated By:	Manasi
Date Created:	1 Feb 2025	Date Last Updated:	9 Feb 2025

Actor:	User, Guest
Description:	Displays personalized car park recommendations based on user
•	preferences, historical data, and current conditions including
	availability, distance, pricing, and facility features.
Preconditions:	Search Destination functionality is active
	2. User location is available
	3. Car park data is accessible
	4. Filter preferences are set (if any)
Postconditions:	Recommended car parks are displayed
	2. Recommendations are ranked by relevance
	3. Key information for each recommendation is visible
Priority:	High
Frequency of Use:	Frequent (Multiple times per search)
Flow of Events:	System analyzes available car parks based on:
	1.1. Current location
	1.2. User preferences (if available)
	1.3. Real-time availability
	1.4. Historical usage patterns
	2. System displays recommended car parks showing:
	2.1. Distance and estimated travel time
	2.2. Current availability
	2.3. Pricing information
	2.4. Special features (EV, Sheltered, etc.)
	3. User can sort recommendations by different criteria
	4. System updates recommendations in real-time
Alternative Flows:	AF-S2. No suitable recommendations available:
	1. Display closest alternatives
	2. Suggest modified search criteria
	AF-S2.2. Limited availability:
	1. Show next best alternatives
	2. Display wait time estimates
Exceptions:	1. Unable to generate recommendations:
	1.1. Display error message
	1.2. Show general car park list instead
	2. System overload:
	2.1. Show cached recommendations
	2.2. Display last update timestamp
Includes:	None
Special Requirements:	Machine learning integration for personalization
	2. Real-time availability updates
	3. Historical data analysis capability
	4. Quick response time for recommendations

Assumptions:	1. Sufficient data available for recommendations
	<ol> <li>User preferences can be determined</li> <li>Real-time updates are possible</li> <li>Car park information is accurate</li> </ol>
Notes and Issues:

Use Case ID:	UC-011		
Use Case Name:	Register Account		
Created By:	Mayukhi	Last Updated By:	Mayukhi
Date Created:	1 Feb 2025	Date Last Updated:	17 Feb 2025

Actor:	User		
Description:	Allows a user to create a new account by providing necessary		
	details such as username, password, and other relevant information.		
	This enables the user to access personalized features of the system.		
Preconditions:	1. The user is on the registration page.		
	2. The system is connected to the database for storing account		
D ( 1'')	details.		
Postconditions:	Success: The user's account is successfully created, and they are		
	redirected to the login page or logged in automatically. <b>Failure:</b> The system informs the user of any errors (e.g., invalid		
	input, username already taken) and provides guidance to resolve the		
	issue.		
Priority:	High		
Frequency of Use:	Infrequent (only used when a new user registers)		
Flow of Events:	1. The user navigates to the "Register" page.		
Tiow of Events.	2. The user enters required information, including:		
	a. Username		
	b. Password		
	c. Additional information (e.g., email, phone number,		
	etc.)		
	3. The system validates the input:		
	a. checks if the username is unique		
	b. checks if the password fits the security		
	requirements		
	c. ensure all mandatory fields are filled		
	4. If all inputs are valid:		
	a. The system stores the account details in the database.		
	b. A confirmation message is displayed.		
Alternative Flows:	AF-S4: If the inputs are invalid, it could be due to one of these 2		
Atternative Flows.	711 -54. If the inputs are invalid, it could be due to one of these 2		
	Username Already Taken:		
	1. The system informs the user and suggests alternative		
	usernames.		
	2. The user enters a new username.		
	Weak Password:		
	The system provides feedback on password strength.		
	2. The user updates the password to meet requirements.		

Exceptions:	<b>Database Error:</b> The system encounters an issue storing the account details in the database.	
Includes:	None	
Special Requirements:	<ol> <li>Provide optional or mandatory email or phone verification to confirm account ownership.</li> </ol>	
Assumptions:	<ol> <li>The user has access to a valid email address or phone number for account creation.</li> <li>The system database is functional and can store new account details.</li> <li>The user understands the registration process and inputs data accurately.</li> </ol>	
Notes and Issues:	<ol> <li>Consider simplifying the registration form by limiting the number of mandatory fields.</li> </ol>

Use Case Name:	Forget Password		
Created By:	Manasi	Last Updated By:	Manasi
Date Created:	1 Feb 2025	Date Last Updated:	9 Feb 2025

Actor:	User	
Description:	Enables users to securely reset their forgotten password through a	
	verification process, allowing them to regain access to their	
	account.	
Preconditions:	1. User has an existing account in the system	
	2. User has access to their registered email/phone	
	3. Login page is accessible	
Postconditions:	1. User's password is successfully reset	
	2. User can log in with new password	
	System sends confirmation of password change	
Priority:	Low	
Frequency of Use:	Occasional (Rarely needed by most users)	
Flow of Events:	1. User clicks "Forget Password" option on login page	
	2. System prompts for user identification:	
	2.1. Registered phone number	
	2.2. Registered email address	
	3. System verifies user exists	
	4. System generates and sends verification code:	
	4.1. Via SMS to registered phone	
	4.2. Via email to registered email	
	5. User enters verification code	
	6. System validates code	
	7. System prompts for new password:	
	7.1. New password entry	
	<ul><li>7.2. Password confirmation</li><li>8. System validates password requirements</li></ul>	
	1 1	
	9. System updates password 10. System confirms successful password reset	
Alternative Flows:	10. System confirms successful password reset  AF-S3: Invalid user identification:	
Alternative Flows.		
	1. Display error message	
	2. Allow retry AF-S6: Incorrect verification code:	
	1. Allow code resend	
	2. Provide retry option	
Exceptions:	Account locked:	
Exceptions.	1.1. Display lock duration	
	1.2. Provide customer support contact	
	2. System unable to send verification:	
	2.1. Offer alternative verification methods	
	2.2. Show error message	
Includes:	None	
Special Requirements:	Secure password reset process	
1	2. Strong password requirements	
	3. Time-limited verification codes	
	4. Multiple verification methods	
	1. Multiple verification methods	

Assumptions:	User has access to registered contact methods
	2. Database system is operational
	3. Communication services (email/SMS) are available
	4. Password encryption is in place
Notes and Issues:	<ol> <li>Consider implementing security questions</li> </ol>

Use Case ID:	UC-013		
Use Case Name:	Get Navigation		
Created By:	Manasi	Last Updated By:	Mayukhi
Date Created:	1 Feb 2025	Date Last Updated:	17 Feb 2025

Actor:	User, Guest, Location Service		
Description:	Provides real-time navigation guidance to selected parking		
•	locations, including route optimization, turn-by-turn directions,		
	alternative routes, and real-time traffic updates. Integrates with		
	external location services for accurate navigation.		
Preconditions:	<ol> <li>User has selected a destination car park</li> </ol>		
	2. GPS/Location services are enabled		
	3. Device has internet connectivity		
	4. Location Service is operational		
	5. User has granted necessary location permissions		
Postconditions:	1. Navigation route is displayed to user		
	2. Turn-by-turn directions are available		
	3. Real-time updates are active		
	4. Route is optimized based on current conditions		
Priority:	High		
Frequency of Use:	Very Frequent (Multiple times daily)		
Flow of Events:	1. User requests navigation to selected car park		
	2. System initiates connection with Location Service		
	3. Location Service returns route data		
	4. System displays navigation interface:		
	4.1. Map view with current location		
	<ul><li>4.2. Selected car park location</li><li>4.3. Recommended route</li></ul>		
	<ul><li>4.3. Recommended route</li><li>4.4. Alternative routes</li></ul>		
	4.4. Alternative routes 4.5. Estimated Arrival Time (ETA)		
	5. System begins turn-by-turn navigation:		
	5.1. Visual instructions		
	5.2. Distance to next turn		
	6. System provides continuous updates:		
	6.1. Real-time traffic updates		
	6.2. Route recalculation if needed		
	6.3. ETA adjustments		
	7. System monitors approach to destination:		
	7.1. Entrance approach guidance		
	7.2. Final parking instructions		
Alternative Flows:	1		
	AF-S8.2: Better route becomes available:		
	1. Alert user of faster route		
	2. Offer route switch option		
	AF-8.1: User deviates from route:		
	Automatic route recalculation		

	2. Update navigation instructions	
Exceptions:	Location Service unavailable:         a. Switch to offline navigation mode         b. Display cached maps if available         c. Show static directions      Invalid destination coordinates:         a. Request destination reconfirmation         b. Suggest nearby valid locations      No route available:         a. Display error message	
	b. Suggest alternative destinations	
Includes:	None (But interfaces with Location Services)	
Special Requirements:	<ol> <li>Real-time GPS integration</li> <li>Traffic data integration</li> <li>Multiple mapping service support</li> <li>Offline navigation capability</li> <li>Voice guidance system</li> <li>Battery optimization features</li> </ol>	
Assumptions:	Device has sufficient GPS accuracy Location Service is reliable Map data is current Device has adequate processing power Audio output is available for voice guidance	
Notes and Issues:	1. Consider implementing: 1.1. AR navigation features 1.2. Parking level specific guidance 1.3. Indoor navigation capabilities 1.4. Integration with car park systems 1.5. Historical traffic pattern analysis 1.6. Battery consumption warnings 1.7. Navigation sharing features	

Use Case ID:	UC-014		
Use Case Name:	View History		
Created By:	Mayukhi	Last Updated By:	Manasi
Date Created:	2 Feb 2025	Date Last Updated:	9 Feb 2025

Actor:	User	
Description:	Allows users to view their past parking sessions, including details such as parking locations, timestamps, duration, and fees (if applicable). Users can filter, sort, or export history for reference.	
Preconditions:	<ol> <li>User is logged into the app.</li> <li>Past parking session data exists in the system.</li> <li>Device has internet connectivity (for real-time data retrieval).</li> </ol>	
Postconditions:	<ol> <li>User successfully views parking history.</li> <li>History is displayed in an organized manner.</li> <li>Users can filter and sort past records.</li> <li>Users can access session details when needed.</li> </ol>	
Priority:	Medium	
Frequency of Use: Flow of Events:  Alternative Flows:	Occasional  1. User selects the "History" option from the app menu. 2. System retrieves parking history from stored records. 3. System displays a list of past parking sessions, including:  a. Date and time of parking  b. Parking location  c. Duration of parking  d. Parking fee  4. User can apply filters (e.g., by date, location) to refine search results (if needed).  5. User selects a specific record to view more details.  6. System displays detailed information for the selected parking session.  AF-S2: No Parking History Available:  1. System displays message: "No parking history available."  AF-S4: User Applies Filters:  1. System updates the displayed records based on selected	
Exceptions:	filters.  1. System Failure:  a. System displays error: "Unable to retrieve history. Please try again later."  2. No Internet Connection:  a. System may display cached history (if available). b. Otherwise, show message: "Internet required to access full history."	
Includes:	None	
Special Requirements:	<ol> <li>Secure storage of parking history.</li> <li>User-friendly filtering and sorting options.</li> <li>Compliance with data privacy regulations (e.g., allow users to delete history).</li> </ol>	

Assumptions:	1. Parking session data is accurately recorded.	
	2. Users have necessary permissions to access history.	
Notes and Issues:	1. Consider implementing:	
	a. Frequent Locations feature based on history.	
	b. Data visualization for insights into parking habits.	
	c. History-based recommendations for parking spots.	

Use Case ID:	UC-015		
Use Case Name:	Access Settings		
Created By:	Mayukhi	Last Updated By:	Mayukhi
Date Created:	2 Feb	Date Last Updated:	17 Feb

A	Han Cusat
Actor:	User, Guest
Description:	Allows both guests and registered users to configure and personalize app preferences. Guests have access to basic settings such as theme customization, while registered users can manage account-related settings, privacy options, and notifications.
Preconditions:	The user or guest has accessed the settings menu.
	System settings are available for modification.
Postconditions:	<ol> <li>Preferences are successfully updated and saved.</li> <li>System applies changes immediately or after a restart if</li> </ol>
	necessary.
Priority:	High
Frequency of Use:	Occasional
Flow of Events:	Guest/User navigates to the "Settings" section in the app menu.
	System displays available settings categories based on role:     a. Guest Settings:
	<ul><li>i. Theme Customization (Light/Dark mode)</li><li>ii. Basic Location Preferences</li></ul>
	b. User Settings: (Includes all Guest settings + additional options)
	i. Account Settings (Change password, email,
	phone number, delete account)  ii. Notification Preferences (Enable/disable
	alerts, reminders)
	iii. Privacy Settings (Manage data sharing, location permissions)
	iv. Advanced Location Services
	(Enable/disable GPS tracking, set accuracy level)
	3. Guest/User selects a setting to modify.
	4. System displays available options for the selected setting.
	5. Guest/User updates the setting and confirms the changes.
	6. System applies and saves the updated settings.
	<ol><li>System notifies the guest/user of successful changes (if required).</li></ol>
Alternative Flows:	AF-S3: Settings Require App Restart:
	1. System informs the guest/user that certain changes (e.g.,
	them selection) will take effect after restarting the app.
	AF-S1: Guest Upgrades to Registered User:
	1. Additional settings become available after account creation.
	AF-S5: User Cancels Changes:  1. No modifications are made: system retains provious
	No modifications are made; system retains previous settings.
	soungs.

Exceptions:	1.	System Error Prevents Updates:	
_		a. System displays error message: "Unable to update	
		settings. Please try again later."	
	2.	Network Dependency for Certain Settings:	
		a. If settings require an internet connection (e.g.,	
		account changes), system displays a message:	
		"Internet connection required to update this	
		setting."	
Includes:	None		
Special Requirements:	1.	1. Secure storage of user preferences.	
	2.	$\mathcal{E}$	
	3.	Accessibility support (e.g., larger fonts, voice assistance).	
	4.	Multi-language support.	
Assumptions:	1.	1. Guests have limited settings access.	
	2.	$\mathcal{E}$	
	3.	System permissions allow modification of settings.	
Notes and Issues:	1.	Consider implementing:	
		a. Backup & Restore Settings to sync preferences	
		across devices.	
		b. Customizable Quick Settings for frequently	
		changed options.	
		c. Privacy-focused options to comply with data	
		protection regulations.	

Use Case ID:	UC-016		
Use Case Name:	Login as Guest		
Created By:	Mayukhi	Last Updated By:	Mayukhi

Actor:	Guest	
Description:	Allows a guest to access the app without creating an account. Guests can explore basic features such as searching for parking	
	slots, viewing maps, and adjusting basic settings but will have	
	limited access compared to registered users.	
Preconditions:	1. The app is installed and launched.	
Postconditions:	1. Guest successfully enters the app without an account.	
	2. Guest can access permitted features.	
	3. Guest mode restrictions are enforced.	
Priority:	High	
Frequency of Use:	Frequent	
Flow of Events:	<ol> <li>Guest opens the app.</li> <li>System displays the Login/Sign Up screen with a "Continue</li> </ol>	
	<ul><li>as Guest" option.</li><li>3. Guest selects "Continue as Guest".</li></ul>	
	4. System provides access to guest-permitted features, such	
	as:	
	a. Viewing available parking locations	
	b. Searching for car parks	
	c. Navigating to a selected car park	
	d. Adjusting basic settings (eg. theme)	
	5. System displays a notification or prompt indicating that	
	some features require an account (e.g., booking/reserving a	
	parking slot, saving preferences, accessing history).	
	6. Guest can continue exploring the app or choose to register for full access.	
Alternative Flows:	AF-SGuest Tries to Access a Restricted Feature:	
	a. System prompts guest to sign up or log in to access	
	that feature.	
	Guest Upgrades to a Registered User:	
	b. Guest selects the option to create an account, and	
Exceptions:	the system transitions to the registration process.  1. App Requires Internet Connection:	
Exceptions.	a. If the app needs real-time data (e.g., live parking	
	availability) and the guest is offline, the system	
	displays a message: "Internet connection required	
	for real-time updates."	
Includes:	None	
Special Requirements:	Guest mode should have clear UI indicators to show limited	
	access.  2. Guest access data should be temporary (e.g.,	
	session-based).	
	3. The app should encourage registration without forcing it.	
Assumptions:	Guests will have fewer privileges than registered users.	

	<ul><li>2. Some features are only available to registered users.</li><li>3. Guest access does not store personal data permanently.</li></ul>	
Notes and Issues:	Consider implementing:         a. Seamless transition to account creation (e.g., if a guest tries to book a parking spot, they can sign up without losing progress).         b. Temporary data storage (e.g., guest session expires after app restart).         c. Guest session tracking to understand usage patterns.

A	TT	
Actor:	User	
Description:	Allows users to save their parking location by either taking a photo or writing a note within the app. This helps users remember where they parked, especially in large or crowded parking areas. The stored information can be accessed later when retrieving the car.	
Preconditions:	1. User is logged into the app.	
	User has granted necessary permissions (camera, storage, location).	
Postconditions:	<ol> <li>Parking location is successfully saved.</li> <li>User can retrieve the saved location, photo, or note when needed.</li> <li>The data is stored until the user deletes it or a session expires.</li> </ol>	
Priority:	Medium	
Frequency of Use:	Occasional	
Flow of Events:  Alternative Flows:	<ol> <li>User selects the "Save Parking Location" option in the app.</li> <li>System provides two options:         <ol> <li>Take a Photo of the parking spot.</li> <li>Write a Note (e.g., "Level B2, Zone C, Near Exit 3").</li> </ol> </li> <li>User chooses an option and inputs the information.</li> <li>System stores the saved parking details along with the timestamp and optional GPS location.</li> <li>User can later access the saved location via the "Find My Car" section.</li> </ol> <li>AF-S2.1: User Takes Multiple Photos:         <ol> <li>System allows users to upload or capture multiple images for better reference.</li> </ol> </li> <li>AF-S5: User Edits or Deletes the Saved Location:</li>	
	<ol> <li>System provides an option to update or remove the saved parking details.</li> </ol>	
Exceptions:	<ol> <li>Camera or Storage Access Denied:         <ul> <li>a. System displays an error message and prompts the user to enable permissions.</li> </ul> </li> <li>Insufficient Storage:         <ul> <li>a. System warns the user and suggests freeing up space.</li> </ul> </li> <li>User Exits Before Saving:         <ul> <li>a. System discards unsaved data and returns to the main screen.</li> </ul> </li> </ol>	
Includes:	None	
Special Requirements:	Secure and temporary storage for saved locations.	

	<ol> <li>Quick access to saved parking details.</li> <li>Easy-to-use interface for capturing and retrieving information.</li> </ol>
Assumptions:	<ol> <li>Users may need to store multiple parking locations temporarily.</li> <li>Saved data should not persist indefinitely unless manually deleted.</li> <li>The system does not automatically track the car's location (manual input required).</li> </ol>
Notes and Issues:	<ol> <li>Consider implementing:         <ul> <li>a. Parking Timer Reminder to notify users about time limits.</li> <li>b. Offline Support for saving and retrieving notes/photos without an internet connection.</li> </ul> </li> </ol>
